

Scope for the *Electronics Letters* website

As a journal at the forefront of its field, *Electronics Letters* publishes papers covering all themes of electronic and electrical engineering:

- Energy & Power
- Communications
- Signal Processing
- Sensing
- Imaging & Displays
- Biomedical & Life Sciences
- Artificial Intelligence & Robotics
- Electronics
- Photonics

These interdisciplinary themes represent the full range of *Electronics Letters*' core applications and technologies:

Applications

- Communications
- Energy and power
- Robotics
- Computing
- Biomedical technology
- Transport
- Displays and imaging
- Remote sensing and navigation
- Sensing and measurement

Technologies:

- Antennas
- Audio processing
- Control
- Electromagnetics
- Image and video processing
- Circuits & devices
- Micro and Nano-scale technology and devices
- Microwave technology
- MIMO
- Optical communication
- Organic circuits
- Photonics
- Radar
- Semiconductor devices
- Superconductors
- Synthetic biology
- Energy and power devices and systems
- Acoustical Engineering

- Materials for electronics
- Information theory
